NUOVO DISPOSITIVO DI SCOLLEGAMENTO PER LE SPAZZOLE IN GRAFITE DELLA SERIE Z1000

Questo dispositivo è stato progettato per evitare che il collettore del motore elettrico si guasti quando la spazzola si consuma completamente ed il supporto di spinta striscia sul collettore.

Non appena infatti la spazzola arriva al livello minimo di sicurezza, un perno in plastica, che si trova inserito all'interno della spazzola, fuoriesce spinto da una molla interrompendo il passaggio di corrente tra la spazzola e il collettore e fermando quindi il motore.

Non è così più necessario effettuare controlli periodici dello stato di usura delle spazzole e si può ottenere la massima sicurezza operativa. Possono essere dotate di questo dispositivo le spazzole alimentate sia via cavo che attraverso la molla ed il funzionamento non è assolutamente influenzato dalla temperatura della spazzola o dall'intensità della corrente.

Il dispositivo è realizzato costruttivamente in modo di evitare che il perno di plastica e la molla possano fuoriuscire dalla spazzola provocando seri danni al collettore.

Le spazzole dotate del dispositivo automatico di scollegamento sono individuate nel catalogo dal numero **1** dopo la lettera **Z**.
